

SELECT SHAKE

Features & Benefits

VISIT THE DAVINCI SELECT SHAKE WEB PAGE

Select Shake is lightweight, which is ideal for structures that cannot take heavier-weight roofing tiles or have long rafter lengths.

Select Shake has been designed for maximum performance, withstanding uplift from wind velocities up to 110mph.

Select Shake can be fixed to roof pitches as low as 15° on fully-boarded roofing applications.

Select Shake achieves the highest Class 4 Impact Test rating, meaning the tiles are highly resistant to any physical storm & hail impact.

Select Shake is fully tested to UK & EU fire regulations. Because of this, the product has no restrictions to boundary construction.

Select Shake has been tested for wind-driven rain penetration at 15° – meaning that your roof is watertight even at this low pitch.

Select Shake can be easily cut & shaped with a standard utility knife, plastics saw, circular saw or power jigsaw.

Select Shake has added UV inhibitors and tested to the industry-standard ASTM rating for roofing products enduring intense Arc exposure.

We manufacture our products from 100% VIRGIN resins, so that we know EXACTLY how they will perform over time & makes them 100% recyclable.

Select Shake will not crack, split or break if dropped, can be walked upon without damage & is highly impact resistant to striking objects!

And let's not forget our incredible 40-year Warranty! The warranty is automatically applied as soon as your roof tiles are delivered to site, so you can sit back, relax, and know that your roof shake, ridge and Tapco accessories are fully covered!

Features & Benefits

The BBA Agrément Certificate is a mark of excellence based on rigorous national and European standards that validate a construction product's specialist

formulation, capability and uniqueness. It is recognised by architects, building planners, Local Authorities, contractors and inspectors as the leading impartial product approval and certification body in the market. BBA certificates are awarded to products in the construction sector after having passed a series of comprehensive and rigorous assessments which are tailored to the individual needs of the manufacturer and in line with building specification guidelines.

SELECT SHAKE CAN BE FITTED IN TWO UNIQUE PATTERNS:

STRAIGHT COURSING

STAGGERED COURSING

The finished look of DaVinci Select Shake tiles creates the appearance of 4", 6", 8" and 10" wood shakes across the entire roofscape, just like natural cedar.

Unlike natural cedar, which requires constant treatment and maintenance to achieve any kind of longevity, Davinci Select Shake requires very little to no maintenance during its full lifespan, and certainly does not need the expensive treatment that is essential to the upkeep of natural cedar. Without preservatives, natural cedar shakes degrade over time, with constant exposure to the sun's UV rays, the elements, and water; but most importantly, without treatment, they can catch on fire! DaVinci Select Shake tiles do not need treating, ever, and will last at least 4-5 times longer than natural cedar on your roof!

**ECO
FRIENDLY**

- The harvesting process of natural cedar consumes large amounts of fuel and is especially destructive to world ecosystems.
- Reduces waste through less product breakage and ongoing maintenance.
- Lightweight tiles save on transportation costs and overall fuel consumption.
- Virgin resins create a longer lasting, more resilient product that is 100% recyclable at the end of its long lifespan.
- The company recycles 759 tonnes of polymer waste on average per year.
- Our manufacturing facilities run a robust regrinding programme for waste material.
